Surya Vamshi S.

Product Management | Strategy & Operations Consulting

Bengaluru, India · +91 9535224687 · suryaa.vammshi@gmail.com · linkedin.com/in/suryaavamshi · github.com/ayrus15

SUMMARY

Product and operations leader with founder experience launching and scaling an institutional SaaS platform (SOCIO), plus a track record directing large-scale operations across 16,000+ applicants, ~1,500 event visitors, and 100+ personnel. Skilled at translating ambiguous stakeholder needs into structured workflows, measurable pilots, and cross-functional execution.

EXPERIENCE

Scaled operational leadership across four engagements — from 2,500 to 16,000+ stakeholders — each converting ambiguity into structured, repeatable systems.

Sociosphere Private Limited — Co-Founder, Product Lead Bengaluru · 2024–Present

- Own product direction and roadmap for SOCIO, an institutional SaaS platform for student engagement and university operations, translating discovery conversations with students, faculty, and administrators into feature priorities.
- Validated the problem with 200+ student discovery conversations before building, then steered the product through three deliberate pivots — student networking, to an event-registration MVP, to full institutional event management — based on stakeholder input.
- Designed end-to-end workflows spanning event discovery, registration, approvals, QR attendance, notifications, and organizer operations, including a multi-stage approval chain (coordinator, HOD, Dean, university management) matched to institutional hierarchy.
- Navigated data-governance requirements for student records, including university-email authentication and data-use discussions with IT stakeholders.
- Led pilot deployments reaching 250+ users across 10 events, generating 2,000+ registrations and 1,500+ QR scans.
- Improved operational turnaround time by digitizing registration, check-in, and attendance workflows.
- Led the team through a live-event reliability issue under real usage load, keeping the pilot running and preserving stakeholder confidence.

Christ University Admissions — Admissions Operations Lead Bengaluru · 2024

- Led admissions operations supporting more than 16,000 applicants across a high-volume institutional environment.
- Directed 100+ NCC cadets across logistics, applicant movement, communication, and on-ground execution.
- Coordinated with university leadership and multiple operational teams to streamline applicant workflows and execute admissions activities.

Daksh & Open Day — Co-Developer & Operations Coordinator Bengaluru · 2025

- Co-built a QR-based visitor management system (React, Node.js, Supabase) with one teammate, covering registration, check-in, volunteer/tour allocation, and a live analytics dashboard — pitched directly to the university IT department.
- Supported ~1,500 total footfall across a 2-day event; diagnosed and fixed a live-event record-retrieval failure at ~1,500 records with pagination, deployed the same afternoon while the event continued.

Student Welfare Office — Records Manager & Event Sponsorship Manager Bengaluru · Nov 2024–Jun 2025

- Managed student datasets and records for the Student Welfare Office, maintaining structured, accurate applicant and student information.
- Contributed to negotiations that secured Rs. 2 lakh in cash sponsorship from The Bear House for InBlooms 2025.
- Served as the brand's point of contact on event day, coordinating stall setup, requirements, communication, and on-ground execution.

SELECTED PROJECTS

Auth — Admissions Workflow Management System

- Built and deployed a QR-based candidate check-in workflow for interview-day admissions operations, tested end-to-end with real academic-year data and demonstrated to the Admissions Cell — not adopted for live rollout that year due to hardware/logistics constraints, not product ones.
- Designed multi-stage QR checkpoints (entry, floor routing, written assessment, interview) with SMS/WhatsApp integration and a faculty co-panel assignment workflow, giving the Admissions Cell real-time visibility into candidate progress.

Nyaya Mitra — AI-Enabled Civic Engagement & Legal Aid Platform

- Designed a web-based civic engagement and legal aid platform to help citizens understand basic legal rights, access legal guidance, and report civic issues through a unified digital experience.
- Defined an AI-enabled product architecture spanning a legal chatbot, NLP document analysis, a recommendation system, civic feedback, whistleblower reporting, and safety workflows.
- Selected among the top projects at Christ University Research Day for applying AI and software engineering to legal accessibility and civic participation.

EDUCATION

CHRIST (Deemed to be University)

Bengaluru, India · 2023–2026

Bachelor of Computer Applications | GPA: 8.0/10

Relevant Areas: Data Structures & Algorithms, Database Management, Web Development, Cloud Computing

LEADERSHIP & ACHIEVEMENTS

- Certified: AWS Certified Cloud Practitioner.
- Winner, Analaiyte 2025 — a multi-round business case competition; finished first among 39 teams after eight elimination rounds.
- Winner, InsightX'25: The Data Heist — solved a forensic data-analysis case using SQL querying and Python-based parsing to reconstruct and interpret a dataset under competition conditions.
- Winner, Pitch Your Idea 2025 Grand Finale — Centre for Artificial Intelligence, Christ University; pitched and defended a product concept before a judged panel.
- Vice Chancellor's Commendation, Christ University — for contributions to university initiatives and student activities.
- NCC Cadet (Corporal) — part of the organizing and execution team for Christ University's convocation for 3 consecutive years, a 3-day event graduating 6,000+ students each year.
- Led the Sports Day band for 2 years, supporting successful execution of the university's annual sports day.
- Student Council member (2025–2026) — contributed to student welfare initiatives and served on the organizing committee for the Daksh event.
- First Prize, DATAGRAM 7.0.

SKILLS

Product: Customer Discovery, Product Strategy, Roadmapping, MVP Planning, User Journey Mapping, Product Analytics, KPI Definition, Stakeholder Management

Operations: Workflow Design, Pilot Deployment, Cross-Functional Execution, Process Improvement

Technical (supporting): TypeScript, React, Next.js, Node.js, SQL and NoSQL (PostgreSQL, MongoDB), AWS
